Aims and scope

Interdisciplinary Science Reviews is a quarterly journal that aims to explore the social, philosophical and historical interrelations among the human and natural sciences, engineering, mathematics, medicine, the arts and technology.

ISR seeks out contributions that measure up to the highest excellence in scholarship but that also speak to an audience of intelligent non-specialists. Articles in *ISR* are thus expected to be proactively interdisciplinary. *ISR* explores the differing trajectories of the disciplines and practices in its purview, to clarify what each is attempting to do in its own terms, so that constructive dialogue across them is strengthened. It focuses whenever possible on conceptual bridge-building and collaborative research that nevertheless respect disciplinary variation.

ISR features thematic issues on broad topics attractive across the disciplines, sometimes derived from wide-ranging interdisciplinary colloquia, as well as unsolicited articles. Colleagues interested in proposing a thematic issue are encouraged to write to the Editor directly. Before submitting a contribution, authors should read “ISR’s intellectual project”, published in *ISR* 41.1 (2016), to make sure that what they have in mind will fit within the scope of the journal.

Submitting to *Interdisciplinary Science Reviews*
